

SECTION 07 59 00
ELASTOMERIC ROOF COATING

PART 1 - GENERAL

1.1 DESCRIPTION

- A. Roof/Dormer coatings are to be a flexible white siliconized elastomeric roof coating and applied as recommended by manufacturer of product approved.
- B. Prepare roof/dormer as recommended by coating manufacturer. Clean, patch, prime, etc. the roof as recommended prior to applying the final coating.
- D. Apply by spraying, rolling, brush or other approved method. Spraying shall not be done on a windy day that can cause overspray to coat other areas. Protect all areas not intended to be coated as required. Provide shielding methods to keep coating from leaving the intended areas.
- E. The following page is included as a 'Basis of Design' performance specification.
